Subject: Travel Management, Implementation of 36 CFR, Part 202, Subpart A (36 CFR 212.5(b))

To: Regional Foresters, Station Directors, Area Director, IITF Director, Deputy Chiefs and WO Directors

This letter is to reaffirm agency commitment to completing a travel analysis report for Subpart A of the travel management rule by 2015 and update and clarify Agency guidance. This letter replaces the November 10, 2010, letter on the same topic.

The Agency expects to maintain an appropriately sized and environmentally sustainable road system that is responsive to ecological, economic, and social concerns. The national forest road system of the future must continue to provide needed access for recreation and resource management, as well as support watershed restoration and resource protection to sustain healthy ecosystems.

Forest Service regulations at 36 CFR 212.5(b)(1) require the Forest Service to identify the minimum road system needed for safe and efficient travel and for administration, utilization, and protection of National Forest System (NFS) lands. In determining the minimum road system, the responsible official must incorporate a science-based roads analysis at the appropriate scale. Forest Service regulations at 36 CFR 212.5(b)(2) require the Forest Service to identify NFS roads that are no longer needed to meet forest resource management objectives.

Process

Travel analysis requires a process that is dynamic, interdisciplinary, and integrated with all resource areas. With this letter, I am directing the use of the travel analysis process (TAP) described in Forest Service Manual 7712 and Forest Service Handbook (FSH) 7709.55, Chapter 20. The TAP is a science-based process that will inform future travel management decisions. Travel analysis serves as the basis for developing proposed actions, but does not result in decisions. Therefore, travel analysis does not trigger the National Environmental Policy Act (NEPA). The completion of the TAP is an important first step towards the development of the future minimum road system (MRS). All NFS roads, maintenance levels 1-5, must be included in the analysis.

For units that have previously conducted their travel or roads analysis process (RAP), the appropriate line officer should review the prior report to assess the adequacy and the relevance of their analysis as it complies with Subpart A. This analysis will help determine the appropriate scope and scale for any new analysis and can build on previous work. A RAP completed in accordance with publication FS-643, "Roads Analysis: Informing Decisions about Managing the

America's Working Forests – Caring Every Day in Every Way

Printed on Recycled Paper

National Forest Transportation System," will also satisfy the roads analysis requirement of Subpart A.

Results from the TAP must be documented in a **travel analysis report**, which shall include:

- A map displaying the roads that can be used to inform the proposed action for identifying the MRS and unneeded roads.
- Information about the analysis as it relates to the criteria found in 36 CFR 212.5(b)(1).

Units should seek to integrate the steps contained in the Watershed Condition Framework (WCF) with the six TAP steps contained in FSH 7709.55, Chapter 20, to eliminate redundancy and ensure an iterative and adaptive approach for both processes. We expect the WCF process and the TAP will complement each other. The intent is for each process to inform the other so that they can be integrated and updated with new information or where conditions change. The travel analysis report described above must be completed by the end of FY 2015.

The next step in identification of the MRS is to use the travel analysis report to develop proposed actions to identify the MRS. These proposed actions generally should be developed at the scale of a 6th code subwatershed or larger. Proposed actions and alternatives are subject to environmental analysis under NEPA. Travel analysis should be used to inform the environmental analysis.

The administrative unit must analyze the proposed action and alternatives in terms of whether, per 36 CFR 212.5(b)(1), the resulting road system is needed to:

- Meet resource and other management objectives adopted in the relevant land and resource management plan;
- Meet applicable statutory and regulatory requirements;
- Reflect long-term funding expectations;
- Ensure that the identified system minimizes adverse environmental impacts associated with road construction, reconstruction, decommissioning, and maintenance.

The resulting decision identifies the MRS and unneeded roads for each subwatershed or larger scale. The NEPA analysis for each subwatershed must consider adjacent subwatersheds for connected actions and cumulative effects. The MRS for the administrative unit is complete when the MRS for each subwatershed has been identified, thus satisfying Subpart A. To the extent that the subwatershed NEPA analysis covers specific road decisions, no further NEPA analysis will be needed. To the extent that further smaller-scale, project-specific decisions are needed, more NEPA analysis may be required.

A flowchart displaying the process for identification of the MRS is enclosed with this letter.

Timing

The travel analysis report **must be completed by the end of FY 2015**. Beyond FY 2015, no Capital Improvement and Maintenance (CMCM) funds may be expended on NFS roads (maintenance levels 1-5) that have not been included in a TAP or RAP.

Leadership

The Washington Office lead for Subpart A is Anne Zimmermann, Director of Watershed, Fish, Wildlife, Air and Rare Plants. Working with her on the Washington Office Steering Team are Jim Bedwell, Director of Recreation, Heritage, and Volunteer Resources, and Emilee Blount, Director of Engineering. I expect the Regions to continue with the similar leadership structures which have been established.

Your leadership and commitment to this component of the travel management rule is important. Together, we will move towards an ecologic, economic, and socially sustainable and responsible national road system of the future.

To: Forest Supervisors

REPLY DUE JUNE 29, 2012
RF-2012-038

Enclosed is a letter dated March 29, 2012, from the National Forest System Deputy Chief, with amended direction regarding the implementation of the Travel Analysis Process (TAP) for Subpart A. This letter replaces the January 5, 2011, Travel Analysis Subpart A letter sent to the forest supervisors by the Regional Forester.

The following are the main points of the WO direction that remain unchanged:

- Use the TAP process described in the Forest Service Manual (FSM) 7712 and Forest Service Handbook (FSH) 7709.55, Chapter 20.
- Travel analysis should be used to inform National Environmental Policy Act (NEPA) analysis.
- Units should seek to integrate the steps contained in the Watershed Condition Framework (WCF) with the six TAP steps.
- TAP reports must be completed by FY 2015. If TAP reports are not completed by then, no CMRD road funding can be applied to roads not covered by a TAP.

The following are changes or clarifications to previous direction from the WO/RO:

- Proposed actions for NEPA analysis generally should be developed at the scale of a 6th code subwatershed or larger.
- The identification of the Minimum Road System (MRS) is complete when the MRS for each subwatershed has been decided through NEPA analysis.
- The identification of the minimum road system and list of unneeded roads is no longer a requirement of the TAP report. Those two items should be done in the subsequent NEPA analyses. TAP reports may make recommendations but not decisions.
- Flowchart for displaying the process for identification of the MRS.
- TAP report reviews by the RO TAP steering team are not required and are now optional. There are no changes to the steering team members.
- Regional Forester certification of TAP reports is no longer required.

Caring for the Land, Our Employees, and Those We Serve!

Printed on Recycled Paper

- Forests that have completed TAP reports can move into the decision and implementation phase without further direction or review by the regional office.

Please review the WO letter and comply with this new direction. Also, please review and update your unit's previous schedule to complete TAP reports by FY 2015 and resubmit to the RO. If you have questions, contact Kay Shurtz, Region 4 Transportation Engineer, at 801-625-5222 or kshurtz@fs.fed.us.

Subject: Travel Management Implementation

To: Regional Foresters, Station Directors, Area Director, IITF Director, Deputy Chiefs and WO Directors

This letter supplements and reaffirms the direction provided in my 2300 /2500/7700 March 29, 2012, letter regarding the implementation of Subpart A of the Travel Management Rule, and the subsequent September 2012 communication materials.

Continued shared understanding is needed between the Washington Office and the regions regarding the Subpart A travel analysis report (TAR) and supporting map and completion expectations by the September 30, 2015, date.

The March 29, 2012, letter outlined a process for identifying the minimum road system (MRS) and clarified the TAR that must be completed by the end of fiscal year (FY) 2015. Beyond FY 2015, no Capital Improvement and Maintenance (CMCM) funds may be expended on National Forest System (NFS) roads (maintenance levels 1-5) that have not been included in a travel analysis process (TAP) or roads analysis process (RAP).

In line with this, two video teleconferences (VTCs) were held with the Regional Foresters (July 15, 2013, and August 9, 2013) to discuss progress toward completing the TAR and a supporting map by September 30, 2015, to share lessons learned, to clarify expectations for public involvement, and to discuss the final deliverables.

All regions stated they were on track to meet the September 2015 deadline. We were able to reach agreement on what needs to be completed by the deadline. Each forest will produce a TAR , a list of roads “likely not needed for future use” and a map displaying the roads. Forests which have completed their TAR will need to ensure their maps conform to standard.

Enclosed is the map template to use with your completed TAR and the associated steps for producing the map. A forest must complete the necessary analysis, produce a report summarizing this analysis (TAR), a list of roads likely not needed for future use, and synthesize these results in a map that displays roads that are likely needed and likely not needed in the future aligned with the following map example to meet the September 30, 2015 deliverable.
